Professional Summary

Software Developer with 6+ years of experience building and scaling enterprise CRM, BSS, and billing platforms using Java, Spring Boot, microservices, and REST/SOAP APIs. Experienced in cloud migration (Azure, AWS), Docker and Kubernetes deployments, and CI/CD automation, with a track record of improving system reliability and release velocity. Currently building agentic AI solutions with LangGraph, Model Context Protocol (MCP), and ReAct planners on top of existing CRM applications to automate billing and dispute-resolution workflows.

Experience

Amdocs LLP **Sep. 2023 – Present**

Senior Software Developer *Pune, Maharashtra*

- Developed a production-ready Telecom BSS/Billing Agentic AI platform using LangGraph and Python, exposing carrier billing operations as governed, **LLM-callable tools across 6 domain agents and multiple MCP tools**, and independently designed the Model Context Protocol (MCP) tool layer end to end.
- Developed custom MCP servers and prompt-engineered workflows to automate business processes, **improving data accuracy by 30% and cutting manual effort by 40%**.
- Led AI adoption across the CRM team by defining workflows, use cases and Markdown-based documentation standards, writing Cursor AI rules and guardrails, and building reusable agent skills for automated PR creation and CI/CD triggering, **cutting developer time by 60%**.
- Led the cloud migration of a legacy CRM application from on-prem RHEL to Azure, rebuilding the deployment architecture with Docker and Kubernetes and automating config and secrets management, while **cutting prod/non-prod compute costs** through scheduled environment shutdowns.
- Migrated 100% of SOAP services to REST/JSON APIs, improving performance, scalability and interoperability while reducing integration defects.
- Upgraded Order Broker applications to Java 17 and Spring Boot 3.2 as part of the Enterprise Tech Refresh, resolving FOSS and security vulnerabilities to meet enterprise compliance standards.
- Drove SRE practices for a high-volume production CRM, including monitoring with Prometheus and Grafana, incident response and release governance. **Fixed 120+ bugs and resolved hundreds of production incidents** during the monolith-to-microservices migration of the Enterprise Ordering System, minimizing revenue impact for enterprise customers.

Amdocs LLP **July 2020 – Sep. 2023**

Software Developer *Pune, Maharashtra*

- Developed the Enterprise Order Broker using ActiveMQ and Apache Camel to integrate Enterprise and Consumer systems, enabling **near-real-time data synchronization (<5s latency)** and eliminating batch-processing delays.
- Automated recovery for order failures and fallouts, handling edge cases and **lifting order completion above 99%** within SLA.
- Developed Spring Boot microservices and REST APIs for order processing, provisioning and billing, with asynchronous event handling over ActiveMQ.
- Developed CRM, billing and third-party integrations using JBoss Fuse, SOAP and REST, with robust error handling and logging.

- Partnered with the billing team and cross-functional stakeholders to resolve complex issues, and **cut API response time by 11%** through back-end optimization in an EJB, Hibernate and JPA architecture on Oracle and PostgreSQL.
- Automated deployments with Bamboo and Jenkins Continuous Integration/Continuous Delivery (CI/CD) pipelines and shell scripts, built Python monitoring that recovers servers automatically, and supported the move to Blue-Green deployments for zero-downtime releases in an Agile team.
- Resolved **200+ production defects and incidents** across order management and billing, improving stability and service delivery.

ORNNOVA Technologies india Pvt Ltd **Nov. 2018 – Dec. 2018**
Application Developer Intern *Bengaluru, Karnataka*

- Developed and implemented a food ordering system covering the full order lifecycle, from placing an order to generating the final bill, using PHP, HTML, and JS.
- Completely transformed manual ordering into a web-based online ordering system per client requirements, minimizing turnaround time and providing real-time updates to the kitchen/admin.
- Implemented an admin login where the admin could view real-time analytics, such as the number of orders processed and revenue generated, and add or modify menu items.
- Provided functionalities like, Real time data sharing to the kitchen using MySQL triggers, as chefs to work on the orders and billing the Order with pre-configurable Tax rates which can be configured at admin area.

Technical Skills

Languages: Java 8/17, Python, SQL, Shell Script, HTML/CSS, PHP, Node.js, React

AI / Agentic: LangChain, LangGraph, Model Context Protocol (MCP), FastMCP, A2A Protocol, ReAct Agents, Langfuse, Prompt Engineering, LLM Guardrails, OpenAI / Azure OpenAI, Cursor AI, Agent Skills, AI Documentation

Backend & Integration: Spring Boot, Spring Framework, Microservices, REST APIs, SOAP Web Services, Hibernate, JPA, EJB, Apache Camel, JBoss Fuse, ActiveMQ, SOA

Cloud & DevOps: Azure, AWS, Docker, Kubernetes, OpenShift, Helm, CI/CD, Jenkins, Bamboo, Nexus, Prometheus, Grafana, OpenTelemetry, ELK Stack, Blue-Green Deployment

Databases: PostgreSQL, Oracle Database, MySQL

Developer Tools: IntelliJ IDEA, VS Code, Eclipse, Maven, Git, Bitbucket, Perforce, Jira, Postman, SoapUI, SonarQube, Fortify, Jupyter Notebook/Lab

Practices: Agile, SRE, Incident Response, Release Governance, Unix/Linux, Version Control

Education

S.R.M Institute of Science and Technology **July 2016 – June 2020**
Bachelor of Science in Information Technology *Chennai, Tamil Nadu*

Narayana Junior College **June 2014 – June 2016**
Higher Secondary Education *Hyderabad, Telangana*
